The 2017 Senior Health Report is a supplement to the 2013 Stanislaus County Community Health Assessment produced by the Stanislaus County Health Services Agency. The purpose of this report is to identify and assess issues and concerns that are specific to older residents of the county. While seniors were included in the 2013 Community Health Assessment, this report highlights the specific experiences and needs of residents at or above 60 years old to inform programs providing outreach to, and services for, them.

**Methods**

**Primary Data**

Data for the Senior Health Report was compiled from the 2013 primary CHA survey, and assorted secondary sources. For the purposes of this report, seniors are defined as adults 60 years of age and above. When data was not available for this range, 65 and above was used and is noted.

The 2013 primary CHA survey was administered to adults living in Stanislaus County in order to understand the health and well-being of county residents. Surveys were available on paper in English and Spanish and electronically in English, with data collection conducted between April and August of 2013. Overall, 2,056 surveys were collected from adults 18 and older and 343 surveys from seniors 60 and older. The data was analyzed and weighted for region, gender, and poverty status by the Family Health Outcomes Project (FHOP) at University of California, San Francisco. Additional technical details about the CHA methodology and data can be found in the 2013 CHA.

**Review and Analysis of Secondary Data**

Secondary data from multiple sources was gathered concerning the health and well-being of Stanislaus County residents. The most updated data available from each source was used through December 2016.

The following is a comprehensive list of the secondary data sources used.

1) American Community Survey (ACS; multiple years) from the U.S. Census Bureau
2) California Health Interview Survey (multiple years) from the University of California Health Policy Institute
3) EpiCenter Injury Data from the California Department of Public Health (2014)
4) Death Statistical Master File (DSMF) from the California Department of Public Health (2013-2015)
5) IHSS –Case Management, Information and Pay-rolling System (CMIPS) Stanislaus County
6) Elder Abuse data came from the Stanislaus County Community Services Agency.
7) Elder Income Security Index was obtained from Insight Center for Community Economic Development (2011).

**Statistical Stability**

Given the importance of having data for local decision makers to base their strategic planning, statistically non-significant or unstable results were sometimes reported within this document and have been clearly marked as such with “^”. Caution is urged when interpreting these results.

**Privacy Concerns**

In order to protect the identity of participants, results for groups of less than 10 individuals, in which some demographic or other potentially identifying piece of information (following federal guidelines established in the Health Insurance Portability and Accountability Act [HIPAA]) was given, are suppressed in this report (i.e. reported as ≤10). Data for other “cells” was also censored when the real values could be used to calculate a blocked value.
Demographics

Out of 531,997 people in Stanislaus County in 2014, 17%—or 90,265 people—were age 60 and above (Figure 1). Of those seniors, 54.1% are female, compared to 50.5% of the total population of the county. The population of seniors has been steadily increasing by over 1,700 people every year, as shown in Figure 2.

**Figure 1: 2014 Population of Stanislaus County by Age**

![Pie chart showing 83.0% of the population is under 60, and 17.0% is 60 and older.](image)

![Graph showing the senior population in Stanislaus County from 2007 to 2014.](source: U.S. Census Bureau, 2007-2014 1 year estimates American Community Survey Table S0102 Seniors 60 and over)

**Education**

More years of schooling is associated with better physical functioning and perceived health [Ross & Mirowsky, 1999]. While Stanislaus County is home to several institutions of higher learning such as California State University Stanislaus, Brandman University, and University of Phoenix, the education levels for the senior population are markedly less than those in the state and country. According to the 2015 American Community Survey one-year estimate, only 70% of Stanislaus County seniors 65 and older have at least a high school degree compared to almost 80% of California seniors and over 82% of US seniors. Similarly, only 16.5% of Stanislaus seniors report having a bachelor's degree or higher education, compared with 30.1% of California seniors and 25.8% of US seniors (Figure 3). Likely, this phenomenon is due in part to the availability of careers in the industrial and agricultural fields in Stanislaus County that do not require high levels of formal education.
Veterans

The current population of seniors came of age during the compulsory draft (1940-1973), which occurred during World War II, the First Indochina War, the Korean War and the Vietnam War. Having lived through such martial times, 16.4% of seniors in Stanislaus County 60 years old or more are civilian veterans\(^1\) (ACS 2015 1-year estimate Table S0102).

Since the draft has not been in effect since 1973, 63% of all civilian veterans are 60 and older. Out of 392,019 adult civilians (residents 18 and older who are not current military), 6.2% are veterans(ACS 2015 one-year estimate Table S0102).

---

\(^1\)“A ‘civilian veteran’ is a person 18 years old or over who has served (even for a short time), but is not now serving, on active duty in the U.S. Army, Navy, Air Force, Marine Corps, or the Coast Guard, or who served in the U.S. Merchant Marine during World War II. People who served in the National Guard or Military Reserves are classified as veterans only if they were ever called or ordered to active duty, not counting the 4-6 months for initial training or yearly summer camps. All other civilians 16 years old and over are classified as nonveterans.” [US Census Glossary]
Disability Status

Disability is defined as

‘a long-lasting physical, mental or emotional condition which can make it difficult for a person to do activities such as walking, climbing stairs, dressing, bathing, learning, or remembering. A disability may also impede a person from being able to go outside the home alone or to work at a job or business’ [US Census Methodology].

Of the civilian non-institutionalized population 60 and older in Stanislaus County, 39.0%—34,454—have a self-reported disability. This is much higher than the disability rates in the same population in California overall (30.6%) and the United States (31.5%) (ACS 2014 1-year estimate Table S0102).

Detailed information on disability status is shown in Table 1 for residents at or above 65 years of age. Of the civilian non-institutionalized population 65 and over in Stanislaus County, 43.8%—27,409—have a disability. That includes:

- 28.3% ambulatory difficulty (serious difficulty walking or climbing stairs),
- 11.9% cognitive difficulty (difficulty remembering, concentrating or making decisions due to a physical, mental or emotional problem),
- 19.7% hearing difficulty (deaf, or having serious difficulty hearing),
- 19.4% independent living difficulty (difficulty doing errands alone such as visiting a doctor’s office or shopping due to a physical, mental or emotional problem),
- 10.3% self-care difficulty (difficulty bathing or dressing), and

---

2 The civilian non-institutionalized population excludes all of those currently serving active duty in the military and those living in institutional group quarters facilities such as correctional institutions, juvenile facilities, skilled nursing facilities, and other long-term care living arrangements. (US Census Glossary)
• 8.7% vision difficulty (blind or having serious difficulty seeing, even when wearing glasses) (ACS 2014 one-year estimate Table S1810).

Compared to California and the United States, Stanislaus County has a much higher proportion of seniors over 65 with any disability (43.8% Stanislaus County, 35.7% California, and 36.0% United States), especially ambulatory difficulty (28.3% Stanislaus County, 23.2% California, and 23.0% United States) and hearing difficulty (19.7% Stanislaus County, 14.3% California, and 15.0% United States). These differences may be associated with the industrial and agricultural economy of this county and related manual labor and noise exposure.

Families and Households

The majority of seniors (65.0%) are married or in a registered domestic partnership (Figure 4). Combined with the over four percent (4.4%) who reported being in a long-term relationship or living with a romantic partner, almost 70% of seniors have a spouse or partner in their lives. Almost a quarter of seniors have lost a spouse either through death, divorce, or separation, and over six percent (6.1%) are single and have never been married.
Grandchildren

In 2014, 10.3% of Stanislaus County’s seniors 60 and older were living with their grandchildren (ACS 2014 on-year estimate Table S0102). Of those living with their grandchildren, 2,098 seniors 60 and older (2.3% of all seniors) were responsible for the grandchildren (ACS 2014 one-year estimate Table S1002). In almost a quarter of those homes (24.6%), the householder or spouse was responsible for the grandchildren without the presence of the child’s parents. Comparatively, in California, 9.1% of seniors lived with their grandchildren, 1.7% of seniors were responsible for the grandchildren, and 29.9% of those responsible for their grandchildren did not have the parents of the children present.

Of Stanislaus seniors living with their grandchildren, 37.9% were living with a disability, compared 27.2% of California seniors living with their grandchildren having a disability.

Housing

Compared to the total adult population of Stanislaus County, more seniors reported having fixed, regular and adequate nighttime residence (Figure 5;
87.8% vs 85.8%). Table 2 lists the categories of homeless situations both seniors and the total adult population reported in descending frequency. Of those in homeless/unstable housing situations, both seniors and all adults in general reported most frequently 'living with friends or relatives because they had lost their home or had no way to get other housing.'

**Economics and Employment**

Full time employment not only provides income as well as (typically) health insurance and social outlets for the general adult population. Many seniors choose to retire for personal or health reasons, but many more do not have the financial autonomy to stop working entirely. The 2013 primary CHA survey revealed that 41.4% of seniors 60 and older are retired, 32.9% work full time and 14.2% work part time. Additionally, 13.3% reported being self-employed, and over two percent (2.1%) reported seasonal employment (Figure 6).
Income

Eligibility criteria for many different services rely on assessment of need based on the federal poverty level, which is calculated each year based on annual household income and number of residents in the home. In 2014, the federal poverty level for a family of one was $11,670, and for a family of two was $15,730 [Klinger, 2014]. The US Census Annual Community Survey estimated that in 2014, 11.8% of Stanislaus County seniors age 60 and older were below the federal poverty level, and another 12.8% were between 100%
and 149% of the poverty level (ACS 2014 1-year estimate Table S0102). In California, 11.1% of seniors 60 and older were below the federal poverty level, but only another nine percent (9.5%) were between 100 and 149%.

**Elder Income Security Index**

According to the Insight Center for Community Economic Development in 2011, only eight percent of Stanislaus County residents 65 and older fell below the federal poverty line. However, they calculated that fully half of all residents 65 and older did not have enough income to meet their most basic needs, leaving 42% of Stanislaus County residents 65 and older in an “eligibility gap”, unable to afford basic needs, but not qualifying for services designated for those strictly “in poverty”. The Insight Center for Community Economic Development based these calculations on the UCLA Center for Health Policy Research in 2011, which pulled data from the American Community Survey data from 2006, when the federal poverty line was $10,890, and the income index in Stanislaus for an elderly renter living alone was calculated at $20,736 per year to meet basic needs.

**Forgoing Basic Needs**

One of the most critical concerns in times of financial hardship is the choice to forgo basic needs. Out of 324 senior respondents to the 2013 primary CHA survey, over five percent (5.3%) reported going without basic needs. The most frequently reported category of needs forgone was food, followed by utilities, transportation, clothing, and rent or housing (Figure 7). With food as the most frequent choice to go without in times of struggle, food assistance services are valuable resources for the county’s senior population. The 2014 American Community Survey reported that over nine percent (9.5%) of households with at least one member 60 years and older received food stamps that year (ACS 2014 1-year estimate Table B22001). While there are direct health effects of going without basic needs such as insufficient nutrition, protection from exposure, safety, and hygiene, indirect effects are also a concern. For example, inability to afford utilities, including electricity for air conditioning, can result in heat injuries or death in the intense summer heat of the region. The numbers reported here may be an underestimate due to
underreporting due to stigma or difficulty reaching the populations that are in need.

Approximately 1 in 20 Stanislaus residents 60 and older reported going without basic needs like food, utilities and transportation.

Source: FHOP, Stanislaus County CHA Community Survey, 2013, N=324
Senior Health

With age can come an assortment of ailments, elevating concerns surrounding health conditions and health care to a greater importance among seniors. Figure 8, illustrates the self-reported health conditions facing seniors 60 and older compared with those of the general adult population of Stanislaus County. The most commonly reported conditions for seniors and all adults were high blood pressure (seniors 54.5%, adults 25.4%), and high cholesterol (seniors 48.0%, adults 26.8%). Seniors reported more diagnoses than the overall adult population, with the exception of mental health disorders. Anxiety, depression, and schizophrenia were all self-reported by the total adult population at 0.7-4.6 percentage points more than seniors.

Seniors reported more than double the prevalence of high blood pressure (54.5% to 25.4%), diabetes (28.8% to 12.0%), heart disease (16.0% to 6.1%) and cancer (14.4% to 5.3%) compared with the overall adult population.
Lack of health insurance can limit a person’s options for receiving needed medical care. Although the requirements of the 2010 Affordable Care Act were not yet fully in effect at the time of this study (2013), the passage of that law demonstrates the importance of health insurance in society. While 20% of people in Stanislaus County reported not having health insurance, only eight percent (8.0%) of seniors lacked coverage (Figure 9). This is likely due in large part to the availability of Medicare to most people 65 and over.
Medicare is by far the most common health insurance for seniors in Stanislaus County. For seniors 65 and over, 78.1% carry Medicare insurance with 50.9% of seniors holding Medicare in addition to other forms of coverage (Figure 10). While Medicare is a great resource for many members of the 65 and older population, there are citizenship/residency requirements and the coverage comes with an associated cost. These are likely some of the barriers keeping over one percent (1.5%) of the 65 and older population without any health insurance at all.
Of those seniors 60 and over who went without healthcare, 61% reported they did so because they lacked health insurance, and 73.8% stated that they skipped healthcare because they could not afford the care (Figure 11). Other insurance problems were also barriers including care insurance would not cover (32.2%), and inability to find a provider accepting all, or part, of the insurance plan (16.5%).
For those who had to go without needed medical care, Figure 12, shows what categories were skipped by seniors compared to all adults. Seniors who skipped healthcare reported going without basic preventative care, care for chronic or ongoing problems, prescription medication, and specialist care at higher rates than the overall population of adults who had to go without healthcare.

Seniors age 60 and older N=23, All Population N=2011

Usual Source of Care

Emergency rooms are designed to address acute and life-threatening conditions and they are required to treat patients regardless of insurance coverage or ability to pay [CMS 2012]. People with non-life-threatening conditions are supposed to use other medical services such as office visits and urgent care. In Stanislaus County, 10.3% of the population, including over seven percent (7.4%) of seniors age 60 and older, report getting most of their health care at the emergency rooms (Figure 13). This discrepancy may be due to seniors having higher rates of health insurance, or seniors having more...
chronic health concerns requiring regular care from non-emergency physicians.

The California Health Interview Study of 2014, revealed that 95.4% of seniors 60 and older in Stanislaus County reported having a usual place to go when they are sick or needed health advice, slightly higher than the percentage for seniors throughout California (93.9%).

**Figure 13: Do Seniors Get Most of Their Health Care at the Emergency Room?**

Yes 7.4%

No 92.6%

*Source: FHOP, Stanislaus County CHA Community Survey, 2013 N=332 Seniors age 60 and older*

**In Home Supportive Services**

In-Home Supportive Services (IHSS) is the largest, publicly funded, non-medical program in the United States designed to provide assistance so that the elderly, blind, and disabled may remain living in their homes. The IHSS program is designed for providers to visit recipients at their home and provide assistance with personal care and domestic services. The program is crucial in keeping the elderly and disabled in their homes instead of costly assisted care facilities, benefiting both the recipient and the taxpayer [IHSS Report to the Community 2007].
As a representation of annual trends, Figure 14 below shows the number of IHSS applications for Stanislaus County residents 65 and older received in the month of June for 2004-2013 and the number of seniors 65 and older in Stanislaus County for each year. The number of applications increased steadily from 2004 to 2009, and has since leveled off at about 3,500 applications every June. Application rates have remained steady at 5.5-6.6% of the senior population with applications in June.

**Figure 14: Senior* IHSS Eligibility Applicants, by Number of Persons, In June, for Stanislaus County and Total County Senior* Population.**

![Graph showing IHSS Applications and Senior Population from 2005 to 2013](chart)

*Source: IHSS-Case Management, Information and Payroll System (CMIPS), 2016
*Seniors 65 and older.

**Physical and Mental Well Being**

**Meeting Friends**

Health restrictions and retirement can leave seniors socially isolated, and is associated with increased mortality and depression [Steptoe, et al. 2013]. The 2013 primary CHA survey showed that seniors are slightly more socially connected than Stanislaus adults overall. Almost 70% of seniors reported meeting friends or relatives at least once a week (Figure 15). Where 11.6% of the general county population sees friends or relatives less than once a month
or never, only over six percent (6.7%) of seniors reports that level of isolation. This may be an artifact of data collection, however, because less connected seniors may have been less likely to participate in the survey. Seniors and their loved ones may make more of an effort to meet due to seniors having fewer casual social encounters leading to a higher degree of isolation overall.

**Figure 15: How Often do You Meet Friends or Relatives Who are Not Living with You?**

![Bar chart showing the frequency of meeting friends or relatives who are not living with respondents.]

Source: FHOP, Stanislaus County CHA Community Survey, 2013
Seniors age 60 and over N=340, All Population N=2026

**Support in Crisis**

Social connectedness is especially important in times of trial. A more diverse social network is associated with better health outcomes such as greater immunity to the common cold and better cardiovascular health [Cohen et al. 1997, Heffner et al. 2011]. Stanislaus County seniors reported several resources available should the need arise. Sixty percent of seniors 60 and older stated that they had five or more people they could look to for help and only two and a half percent stated they had no one to turn to in a time of serious personal crisis (Figure 16). It is possible that many of those who count more than 10 people as resources in the event of crisis may belong to a faith community or other community based organization.
**Figure 16: If You Experienced a Serious Personal Crisis, How Many People do You Feel You Could Turn to for Help?**

![Bar chart showing the percentages of people who feel they could turn to for help in different numbers of people.]

*Source: FHOP, Stanislaus County CHA Community Survey, 2013 N=319 Seniors age 60 and older*

**Neighborhood Questions**

One of the easiest forms of community is found in the neighborhoods where people live. Stanislaus County seniors reported more connection in their neighborhoods than adults overall. Seniors reported higher rates of neighbors helping each other (73.7% vs 67.1%), knowing each other (78.4% vs 75.4%), speaking to each other (82.7% vs. 78.5%), and doing things together (34.4% vs 31.4%) (Figure 17).
In addition to death statistics, serious injuries among the older population are of interest in specific areas including assault, heat, self-inflicted injuries, and falls. Non-fatal emergency department visits are the number of emergency department visits due to injury that do not lead to hospitalization or death; non-fatal hospitalizations are hospital admissions that do not lead to death before discharge; and serious non-fatal injuries are the combination of the two. For the population 65 and older, Stanislaus residents experienced more serious non-fatal injuries per capita due to assaults and heat than California residents in 2014 (Figure 18). Given that the Central Valley experiences much
higher summer high temperatures than most of the rest of the state, more heat injuries are to be expected. Conversely, California seniors over 65 were more likely to experience self-inflicted serious non-fatal injury than those in Stanislaus County. For falls, Stanislaus County seniors saw 5,024 non-fatal emergency department visits per 100,000 population, where the rate for California seniors overall was only 4,178 per 100,000 population (Figure 19). Compared to the state averages, Stanislaus County seniors 65 and older are much more likely to experience serious non-fatal falls, but less likely to experience serious non-fatal self-inflicted injury. Falls are of special concern to the senior population as they result in more severe injury than similar falls in younger people, including head and neck and pelvic trauma [Sterling et al. 2001].

Elder Abuse

As a physically and financially vulnerable population, seniors are at risk for a variety of abuses from caregivers, family, and associates. Stanislaus County Community Services Agency (CSA) investigates all reports of elder abuse including abandonments, abduction, financial abuse, isolation, mental suffering, neglect, physical abuse, self-neglect, and sexual abuse. Figure 20 illustrates the number of reports of elder abuse fielded by CSA annually. It has increased steadily from 1650 cases during the 2010-2011 fiscal year to 2,387 in the 2014-2015 fiscal year. This increasing trend can largely be explained by the growing senior population, as the rate of reports did not change much
during this time (three (3) reports per hundred seniors 65 and over in 2010 versus three and a half (3.5) reports per hundred seniors 65 and over in 2014). According to CSA, the three largest categories of abuse reports are financial abuse (31%), psychological/mental abuse (23%), and neglect (21%). While reports are not always well-founded or simple to investigate, an estimated one-third of reports are confirmed.

**Figure 20: Stanislaus County Reports of Elder Abuse** **Opened During Fiscal Years 2010-2011 to 2014-2015**

![Chart showing reports of abuse and senior population over fiscal years 2010-2011 to 2014-2015.]

*Source: Stanislaus County Community Services Agency, Unpublished data, 2016*

**Elder Abuse is abuse of seniors 65 and older reported to Adult Protective Services.**

**Nutrition and Access to Healthy Food**

Stanislaus County has a rich agricultural industry, but that bounty of produce does not always find its way to the plates of its residents. While 55.3% of seniors report consuming the recommended amount of fruits and vegetables (which is considerably more than the 47.4% of the total adult population who reported the same), seniors reported several barriers to healthy produce consumption. One in four seniors reported limited produce intake because “it goes bad too quickly,” while “not enough time to prepare” the produce, “family
won’t eat it,” and “don’t like the taste” each were reported by close to 12% of seniors, as seen in Figure 21, below.

*Total Population N=2056, Seniors age 60 and older N=343*
Physical Activity and Access to Safe Places

The US Centers for Disease Control and Prevention (CDC) recommends at least 2.5 hours of moderate -intensity aerobic activity such as walking and muscle-strengthening activities at least twice a week for all major muscle groups for all adults who are generally fit [CDC, 2015]. That averages to just over 20 minutes a day of aerobic exercise. Two-thirds of Stanislaus seniors age 60 and older reported over 15 minutes of daily exercise on average (Figure 22). However, only 24.1% of seniors report that they are getting sufficient exercise when asked what obstacles are keeping them from exercising as much as they “should.” The top reasons seniors expressed for not getting sufficient exercise include too busy (40.6%), too tired (34.4%), and physical inability (29.6%) (Figure 23). The total adult population also listed too busy (61.0%) and too tired (42.7%) as their greatest hurdles to exercise, although physical inability only hindered 12.8% of adults. While approximately 20% of seniors and adults listed heat as a reason not to exercise, this number may have been smaller if the surveys were administered during the cooler fall and winter months.
Figure 22: Estimated Average Minutes of Daily Exercise

Source: FHOP, Stanislaus County CHA Community Survey, 2013 N=334
Body Mass Index

Body Mass Index (BMI) is a calculation of weight in relation to height. It is calculated by dividing a person’s weight in pounds by their height in inches squared, and then multiplying by a factor of 703. BMI is used as an indicator of obesity, with BMI categorized as underweight (less than 18.5), normal weight (18.5-24.9), overweight (25.0-29.9), and obese (30.0 or more). Higher levels of fat (associated with increased BMI) are associated with increased risk of negative health outcomes such as Type 2 diabetes, heart disease, stroke, and mortality [CDC, May 15, 2015].
Figure 24 below shows the distribution of BMI calculated for Stanislaus County seniors from self-reported height and weight. The distribution of BMI has moved further away from normal body weight (29.7% in 2008 to 23.1% in 2013), while the percentage of underweight, overweight and obese seniors has increased since 2008 (Figure 25).

Seniors 60 and older

Top Causes of Death

From 2013 to 2015, the leading cause of death for seniors 60 and older in Stanislaus County was diseases of the heart, followed by cancer (Figure 26). Those two causes together comprise half of all deaths among Stanislaus County seniors, with the third leading cause of death, chronic lower respiratory disease, only responsible for over seven percent (7.1%) of senior deaths. From 2013 to 2015, an average 2,975 seniors died each year in Stanislaus County.
Community Concerns

Seniors have many concerns about their communities. Primarily, they are very concerned with crime (78.1%) and neighborhood safety (65.8%) (Figure 27). More than half of seniors also reported being very concerned with alcohol and drugs (64.0%), jobs that pay enough to support a family (58.6%), quality of schools (52.4%), and homelessness (51.0%). While those were the same categories of heightened concern among the general population, seniors have more concern about crime (78.1% vs 71.4%) and alcohol and drugs (64.0% vs 58.8%). The total population has more concern about jobs that pay enough to support a family (65.6% vs 58.6%), quality of schools (57.9% vs 52.4%), and quality/number of parks in the area (40.1% vs 33.8%). Less than one third of seniors or adults were very concerned with asthma and transportation access.
Figure 27: Community Concerns*

*Numbers reported list respondents "very concerned" on a scale of very concerned, somewhat concerned, and not at all concerned.

Seniors age 60 and older
Conclusion

The senior population in Stanislaus County is valuable and reports like these make it easier to identify ways to best support them. They are a growing population with greater rates of disability compared to California overall, especially in relation to ambulatory and hearing difficulties. One in four seniors have incomes less than 150% of the poverty level, and five percent report going without basic needs like food and transportation. Non-fatal hospitalizations and emergency room visits for falls are much more frequent in Stanislaus County seniors than the state as a whole. Meanwhile rates of being overweight and obesity are increasing within this population, as well as higher rates of high blood pressure, diabetes, heart disease, and cancer than adults overall in the county. While there are many possible contributing factors, these can be areas to target further research and services. Programs to support senior health and resources are valuable in Stanislaus County, especially in the fields of affordable healthcare and basic needs.

2013 Stanislaus County Community Health Assessment Questionnaire
Stanislaus County Community Health Assessment Survey

Stanislaus County is conducting a community health assessment for 2013 to identify critical issues in the county. Thank you for taking the time to complete this survey. Your opinions are very important! This survey is taken anonymously (no names), and your responses will be kept confidential.

Only Stanislaus County residents 18 years and over please.

1. What is your zip code?

2. Which area of Stanislaus County do you live in?
   - Ceres
   - Oakdale
   - Hickman
   - Patterson
   - Del Rio
   - Keyes
   - Knights
   - Salida
   - Diablo Grande
   - Turlock
   - Empire
   - La Grange
   - Valley Home
   - Grayson
   - Modesto
   - Waterford
   - Newman
   - Westley
   - Other (specify):

3. How concerned are you about the following issues in your community?

4. Please mark yes or no for each question. In your neighborhood, do neighbors generally...

   - Know each other? ☐ Yes ☐ No
   - Speak to each other? ☐ Yes ☐ No
   - Do things together? ☐ Yes ☐ No
   - Help each other? ☐ Yes ☐ No
   - Keep to themselves? Mind their own business? ☐ Yes ☐ No

5. Please mark the single best option. When I need to go somewhere, I usually get there by...
   - Bike
   - Walking
   - Bus or train
   - Wheelchair/accomer
   - Car or truck
   - Other (specify): ☐ ☐

6. I live _______ miles from the nearest store (like a grocery store, farmer’s market, or fruit stand) that sells healthy food like fresh fruits and vegetables, and it usually takes me _______ minutes to get there (using my normal way to get around).

7. I live _______ miles from the nearest safe place to be physically active (like a park, gym, or walking trail) and it usually takes me _______ minutes to get there (using my normal way to get around).

8. I weigh _______ pounds without shoes.

9. I am _______ feet and _______ inches tall without shoes.

10. In a typical week, I sit (at a desk, couch, in a vehicle) for about _______ hours each day.

11. In a typical week, I do an activity (at work, home, or for recreation) that raises my heart rate and/or makes it difficult to carry on a conversation for about _______ minutes each day.

12. Please mark all that apply. When I don’t exercise as much as I should, it’s because...
   - Not applicable, I get enough exercise
   - I’m not physically able
   - I’m too busy
   - It’s too expensive
   - I don’t like it
   - It’s hot
   - I’m too tired
   - There’s no safe place
   - Other (specify): ☐ ☐

13. Please mark all that apply. Typically, I eat the recommended 5-7 servings of fruits and vegetables (like half a banana or a handful of raisins) _______ days per week. When I don’t get the recommended amount, it’s because...
   - Not applicable, I get the recommended amount
   - I don’t like the taste
   - It costs too much
   - It’s too hard to grow it myself
   - It goes bad too quickly
   - It’s too far to go to get fresh and/or quality produce
   - There’s not enough time to prepare it
   - Other (specify): ☐ ☐

14. Presently, how would you describe your tobacco use (including cigarettes, cigars, chewing tobacco, pipes, hookah, e-cigarettes):
   ○ I am a former tobacco user
   ○ I am a current regular tobacco user
   ○ Occasionally, but not regularly, use tobacco products
   ○ I don’t use tobacco products

15. Considering all types of alcoholic beverages, in the past 30 days, about how many times did you have 5 or more drinks in about 2 hours?
   _______ times

16. During the past 12 months, did you ever feel so sad or hopeless almost every day for two weeks or more in a row that you stopped doing normal activities?
   ○ Yes ○ No

17. If you are a woman over the age of 21, have you had a Pap smear (annual female exam)?
   ○ Yes ○ No ○ Not applicable

18. If you are a woman over the age of 40, have you had a mammogram in the past 2 years?
   ○ Yes ○ No ○ Not applicable

19. If you are a man over the age of 50, have you had a prostate exam (‘glove test’ or PSA blood test)?
   ○ Yes ○ No ○ Not applicable

20. If you are over the age of 45, have you been screened for diabetes (blood sugar test) within the past 3 years?
   ○ Yes ○ No ○ Not applicable

21. If you are over the age of 50, have you been screened for colorectal cancer (stool test, sigmoidoscopy or colonoscopy)?
   ○ Yes ○ No ○ Not applicable

22. Do you have health insurance (like Medi-Cal, Medicare, Health Net, Health Plan of San Joaquin, Blue Cross, Kaiser Permanente)?
   ○ Yes ○ No ○ Not applicable

23. Has a health care provider ever told you that you have any of the following?
   - Asthma  ○ Yes ○ No
   - Anxiety  ○ Yes ○ No
   - Cancer   ○ Yes ○ No
   - Depression ○ Yes ○ No
   - Diabetes  ○ Yes ○ No
   - Heart disease  ○ Yes ○ No
   - High blood pressure ○ Yes ○ No
   - High cholesterol ○ Yes ○ No
   - Stroke or blood clots ○ Yes ○ No
   - Schizophrenia ○ Yes ○ No

24. If you needed health care (including dental, physical, mental, eye, and prescriptions) in the past 12 months, were you able to get it from a licensed health professional (like a nurse, counselor, dentist, doctor, or pharmacist)?
   ○ I haven’t needed health care in past 12 months. (Continue to question 25)
   ○ Yes, I got all needed care in Stanislaus County. (Continue to question 25)
   ○ Yes, I got all needed care outside Stanislaus County. (Continue to question 25)
   ○ Yes, I got all the care I needed, some inside Stanislaus County and some outside Stanislaus County. (Continue to question 25)
   ○ No, I didn’t get all the care I needed. (Answer questions 24a, 24b and 24c)

24a. If no, did you have to go without...
   Basic/preventive care (e.g. checkups, screenings)?  ○ Yes ○ No
   Mental health care? ○ Yes ○ No
   Specialist care (oncologist, heart specialist, allergist)? ○ Yes ○ No
   Alternative care (acupuncture)? ○ Yes ○ No
   Care for a chronic or ongoing problem (diabetes, asthma, arthritis)? ○ Yes ○ No
   Care for an acute or new problem (cold, sprained ankle)? ○ Yes ○ No
   Prescription medications? ○ Yes ○ No
   Prenatal care? ○ Yes ○ No
   Dental care? ○ Yes ○ No
   Vision care? ○ Yes ○ No
   Substance abuse treatment? ○ Yes ○ No
   Other (specify):__________

24b. If you had to go without care, why? Please mark yes or no for each item.
   I didn’t have health insurance. ○ Yes ○ No
   My insurance wouldn’t cover it. ○ Yes ○ No
   I couldn’t afford some or all of the care I needed. ○ Yes ○ No
   I was unable to find a provider that accepts or is part of my insurance plan. ○ Yes ○ No
   I had transportation problems. ○ Yes ○ No
   I didn’t know where to go. ○ Yes ○ No
   I didn’t have child care. ○ Yes ○ No
   I couldn’t schedule an appointment at a time convenient for me. ○ Yes ○ No
   There were inadequate translation services. They did not speak my language well enough I could not communicate with them. ○ Yes ○ No
   I had a bad experience and didn’t want to go back. ○ Yes ○ No
   I was uncomfortable asking for help. ○ Yes ○ No

Please continue to the next page →
24c. If you were unable to get care from a licensed health care professional, did you receive help from any of the following instead? Mark all that apply.
- Family member
- Friend
- Herbalist, curandera or healer
- Online support group
- Phone hotline
- Place of worship/religious leader
- Social service provider
- Spouse or intimate partner
- Support group
- Teacher
- Other:

25. Do you get most of your health care at the emergency room?
- Yes
- No

26. How many people live in your household?
Adults over 18: __________ Children 0-17: __________

27. Please fill out the following table for all children 0-17 living in your household.
- Not applicable (Continue to question 29)

<table>

28. For each child you listed in Question 27 who had to go without health care in the past 12 months, use the choices numbered 1-8 provided below to explain why (use all choices that apply). List all choices that apply next to each child who had to go without care. If your child did not have to go without care, please leave the line blank.

1) No insurance
2) Insurance wouldn’t cover it/Couldn’t afford some or all of the care my child needed
3) Unable to find a provider that accepts or is part of my child’s insurance plan
4) Transportation issues
5) Didn’t know where to go
6) Couldn’t schedule an appointment at a convenient time
7) There were inadequate translation services. They did not speak my language or I could not communicate with them.
8) Had a bad experience and didn’t want to go back

29. In the past 12 months, did you or your family have to go without basic needs such as food, child care, health care, or clothing?
- Yes (Continue to question 29a)
- No (Skip to question 30)

29a. If yes, did you go without...
- Clothing? Yes | No
- Child care? Yes | No
- Food? Yes | No
- Rent/housing? Yes | No
- Transportation? Yes | No
- Utilities? Yes | No

30. If you experienced a serious personal crisis, how many people do you feel you could turn to for help or comfort?
____________ people

31. How often do you meet friends or relatives who are not living with you?
- On most days
- Less than once a month
- Once or twice a week
- Never
- Once or twice a month

32. Please answer the following questions about your housing status.

Do you own your home? Yes | No

Do you rent your home, condo, or apartment? Yes | No

Do you have a fixed, regular, and adequate nighttime residence? Yes | No

Do you live in a place not meant for humans to live in, such as a car, park, sidewalk, or abandoned building? Yes | No

Do you live in an emergency shelter? Yes | No

Do you live in transitional housing for homeless persons who originally came from the streets or emergency shelters? Yes | No

Please continue to the next page →
32. **Continued**
Are you being evicted within a week from a private dwelling, and don’t have a way to get other housing?  
☐ Yes  
☐ No

Do you feel threatened or unsafe in your current housing situation, and don’t have a way to get other housing?  
☐ Yes  
☐ No

Has your home been foreclosed upon?  
☐ Yes  
☐ No

Are you living with friends or relatives because you lost your home or don’t have a way to get other housing?  
☐ Yes  
☐ No

33. **What is your household income each month?**  
(income is any money that comes into the household)  
☐ Less than $929  
☐ $930 to $1,239  
☐ $1,240 to $1,399  
☐ $1,400 to $1,799  
☐ $1,800 to $2,799  
☐ $2,800 to $3,699  
☐ $3,700 to $4,499  
☐ $4,500 to $6,499  
☐ $6,500 to $7,999  
☐ $8,000 to $12,999  
☐ $13,000 to $16,999  
☐ $17,000 or more  
☐ Don’t know

34. **How much does your household pay per month for housing costs, including rent or mortgage, gas, electricity, water, trash and sewage?**  
$☐ Not applicable  
☐ Don’t know

35. **What is the highest level of education you have finished?**  
☐ Less than high school diploma  
☐ High school diploma or GED  
☐ Trade/Technical school  
☐ Community college/AA/AS degree  
☐ Bachelor’s of Art/Science degree  
☐ Graduate/professional degree

36. **Are you currently taking courses to achieve a diploma, certificate or degree?**  
☐ Yes  
☐ No

37. **Have you ever served in the U.S. Armed Forces (Army, Navy, Air Force, Marine Corps, National Guard, Navy Reserves, Coast Guard, U.S. Merchant Marines, Public Health Service, etc)?**  
☐ Yes, on active duty in the past, but not now  
☐ Yes, now on active duty  
☐ Yes, but not on active duty except for initial/basic training  
☐ Yes, in active service in the National Guard  
☐ No, never served in the U.S. Armed Forces

38. **What is your current relationship status?**  
*Mark all that apply.*  
☐ Divorced or separated  
☐ In a long-term relationship and/or living together  
☐ Married or in a registered domestic partnership  
☐ Single, never married  
☐ Widowed

39. **What is your employment status?**  
*Mark all that apply.*  
☐ Homemaker, parent, or caregiver  
☐ Employed part-time  
☐ Employed full-time  
☐ Student  
☐ Seasonally employed  
☐ Retired  
☐ Seeking employment  
☐ Unemployed  
☐ Not seeking employment  
☐ Other (AWP, Alliance WorkNet, Welfare to Work, etc)

40. **Do you consider yourself:**
- Hispanic or Latino (Mexican, Puerto Rican, Colombian, Salvadoran, etc)?  
- Southeast Asian (Cambodian, Laotian, Thai, Vietnamese, etc)?  
- From the Indian subcontinent (Pakistan, Indian, Sri Lankan, Punjabi, Rajasthani, etc)?  
- Assyrian?
- African American or Black?  
- Caucasian or White?  
- Hawaiian or Pacific Islander?  
- Native American or Alaska Native?
- Other (specify):

41. **Do you consider yourself lesbian, gay, bisexual, transgender, or questioning (LGBTQ)?**  
☐ Yes  
☐ No  
☐ Write-in

42. **What best describes your gender identity?**  
☐ Female  
☐ Male  
☐ Prefer not to answer

43. **Which languages do you regularly use in your everyday life?**  
*Mark all that apply.*  
☐ Arabic  
☐ Assyrian  
☐ English  
☐ Hindi  
☐ Lao  
☐ Portuguese  
☐ Punjabi  
☐ Cambodian  
☐ Spanish  
☐ Tagalog  
☐ Vietnamese  
☐ Other (specify):

45. **How old are you?**  
☐ years

*That’s the last question. Thank you! We appreciate your participation.*
